### Overload relay settings

A:  $I_N \times 0.58$

Protection of the motor in Y and  $\Delta$  configuration

B:  $I_N \times 1$

In Y configuration only conditional motor protection

C:  $I_N \times 0.58$

No motor protection in Y configuration

### Starting

$\leq 15$  s

15-40 s

$> 40$  s

Timing relay setting to approx. 10 s

Main circuit:

Depending on the aspired co-ordination type "1" or "2", it is necessary to verify if the fusing and the incomer to the mains and delta contactor can be used together, or if they must be used separately.
